

Cisco Internet Applications and Solutions Self-Study Guide: Cisco Internet Solutions Specialist

Based on the content of the Cisco Internet Solutions Specialist (CISS) Applications Essentials and the Applications Solutions courses, CISS Applications Essentials and Solutions takes the reader step-by-step through the process of application design, identifying the necessary building blocks to facilitate the creation of company-appropriate Internet solutions. Focused on providing a broad overview of applications deployment and management, this Coursebook addresses a number of CiscoA (R) Internet business solutions and the benefits organizations can realize through the implementation of customer care, e-commerce, e-learning, and supply-chain management systems. The framework presented not only provides guidelines for the design, development, deployment, and management of Internet applications but also aims to reduce the complexity of developing Internet applications with its clear, step-by-step approach. Topics addressed include client/server applications, database systems and frameworks, business services, systems management, and models for development, sourcing, and applications. The book reviews the CISS program, applications engineering, applications management and support, provides a series of case studies and concludes with two sample exams, one a practice exam for the Applications Essentials Exam and the other for the Applications Solutions Exam. Each chapter closes with review questions to allow the reader to self-test his/her knowledge of the subject.

SONFlex is the industry's first self-optimizing network solution to support fast Cisco Ultra Services Platform supports the 3GPP Cellular Internet of Things PREMIUM STUDY TOOLS Get valuable certification study tools, practice tests, and more. ...
