

Programming Computer Vision with Python: Tools and algorithms for analyzing images

If you want a basic understanding of computer vision underlying theory and algorithms, this hands-on introduction is the ideal place to start. You'll learn techniques for object recognition, 3D reconstruction, stereo imaging, augmented reality, and other computer vision applications as you follow clear examples written in Python. *Programming Computer Vision with Python* explains computer vision in broad terms that won't bog you down in theory. You get complete code samples with explanations on how to reproduce and build upon each example, along with exercises to help you apply what you've learned. This book is ideal for students, researchers, and enthusiasts with basic programming and standard mathematical skills. Learn techniques used in robot navigation, medical image analysis, and other computer vision applications. Work with image mappings and transforms, such as texture warping and panorama creation. Compute 3D reconstructions from several images of the same scene. Organize images based on similarity or content, using clustering methods. Build efficient image retrieval techniques to search for images based on visual content. Use algorithms to classify image content and recognize objects. Access the popular OpenCV library through a Python interface.

Find helpful customer reviews and review ratings for *Programming Computer Vision with Python: Tools and algorithms for analyzing images* at [Editorial Reviews](#). [Book Description](#). Tools and algorithms for analyzing images. About the Author. Jan Erik Solem is a Python enthusiast and a computer vision expert. [The Paperback of the Programming Computer Vision with Python: Tools and Algorithms For Analyzing Images by Jan Erik Solem at Barnes & Noble](#). [Title Programming Computer Vision with Python: Tools and Algorithms for Analyzing Images Author\(s\) Jan Erik Solem Publisher: O'Reilly Media, 1 edition](#). About PCV. PCV is a pure Python library for computer vision based on the book *Programming Computer Vision with Python* by Jan Erik Solem. [Programming a computer and designing algorithms for understanding what is in an image](#). Chapter 1 Introduces the basic tools for working with images and the central Python processing methods for measuring and analyzing basic shapes. [Read Programming Computer Vision with Python: Tools and Algorithms for Analyzing Images book reviews & author details and more at Amazon.com](#). [Programming Computer Vision with Python: Tools and algorithms for analyzing images. Front Cover. Jan Erik Solem. O'Reilly Media, Inc., Jun 2006](#). Tools and
