Microcomputer Business Applications and Projects

Microcomputer Business Applications and Projects is the first combination tutorial and application text/workbook. Designed to be used in any hands-on microcomputer course dealing with information processing applications, this text provides experience with word processing, spreadsheet, data base management, graphics and communications applications software concepts. Guided by specially designed educational software and a corresponding learning guide, students are introduced to the software through a series of progressive hands-on application projects that progress from simple to complex. Pedagogically sound features include: learning objectives, highlighted key terms and descriptive side-margins, comprehensive chapter summaries, chapter review questions, case studies, glossary. The package takes approximately 20 - 30 hours to complete.

Identify and describe elements of a project. Plan a project. Estimate costs and duration. Build a project definition. Create a project schedule.
