

Getting Started with CSS

Knowledge of Cascading Style Sheets (CSS) is essential for developing modern, attractive websites, but many beginners are put off by the need to learn about unfamiliar concepts, such as selectors, properties, and classes, before they can achieve anything. Getting Started with CSS takes a practical approach by showing you how to use CSS in simple stages, starting by changing the default appearance of HTML tags to improve the look of text and links. It assumes no prior knowledge of CSS and avoids bombarding you with unnecessary technical details. At the same time, it explains all the main points and acts as a reference that you can come back to when you need to refresh your memory. More advanced concepts are introduced gradually, so that by the end of the book you'll have a solid understanding of all the main aspects of CSS. Particular attention is paid to avoiding the common pitfalls of beginners, enabling you to create websites that not only look good, but also are easy to maintain.

Requires no previous knowledge of CSS
Instant results starts off by showing how to improve the look of a website stage by stage
Doesn't bombard you with endless rules and jargon
What you'll learn
How to immediately improve the look of your entire website by controlling fonts and colors with just a few lines of code.
How to control the layout of elements on the page without resorting to complex tables.
How to add background images that appear exactly where you want them.
How to create effective style sheets that are easy to maintain by avoiding common mistakes such as over-reliance on classes (classitis).
