

Heating up the Summer

Watch Over Me: Kaylie drop-dead sexy neighbor, Evan, that shes been fantasizing about for months asks her out. But things really heat up when she watches him across the way do a seductive strip tease in his apartment. Sometime voyeurism can be fun! Latin Heat: Broken-hearted Simone Blackburn escapes to a beautiful Caribbean paradise to forget her cheating ex-husband and finds herself face-to-face with the one thing she hoped to avoid: an available, sexy, and handsome man. Maggies Menage: In the middle of a heat wave, Maggie, a conservative accountant, wears a skimpy dress, capturing the attention of Peter, a man shes been interested in for years. Things go from hot to fiery when she, Peter, and his male friend find themselves in a stalled elevator. Hottest Day of the Year: Three offbeat, fearless women--outsiders in their own parochial community of Kennington, Connecticut come together as the unlikeliest band of friends whom, with each others support and trust, break free of the social and sexual mores that bind an oppressive world of fearful conservatism and small-town mentality. Make me Burn: Bradys a firefighter whos been roped into strutting his stuff at a fund-raising dinner. Hes the last person Ivy expects to join her in the banquet halls secluded gardens when theyre on break. When flames ignite between the two of them, Ivy realizes theres only one thing they can do that will extinguish the fire shes feeling. Anitas Menage: One woman, three men, and a whole lot of yum. Working out of town at a conference with her three, sexy male co-workers, Anita fantasizes about having them all-simultaneously! When the opportunity presents itself, she cant resist.

home. There are many ways to keep cool in summer that can reduce your need for cooling shining directly through your windows and heating up your home. Computers produce a lot of heat on their own. If you have a unibody MacBook

you'll notice how the aluminum heats up when you're doing it. Here you'll find strategies to help you save energy during the spring and summer when the weather is warm and you are trying to keep your home cool. Some of them are because the Earth's axis is tilted. It is all about the tilt of the Earth's axis. Many people believe that the temperature changes because the Earth is closer to the sun in summer and farther from the sun in winter. Also, the long daylight hours allow the Earth plenty of time to reach warm temperatures. Workers tell me about messing with the thermostat, buying space heaters and bringing managers into their fights to keep workspaces cool. As we push toward the end of July, many in the United States have seen their average warmest day of the year. But for some, the heat will peak.
