

Apple Pro Training Series: Advanced Logic Pro 7

If you want to do more than simply use Logic to improve the audio in your video projects-if you want to start actually creating and producing music with it-this Apple-certified guide provides the key. Whether you're a composer, producer, songwriter, engineer, studio programmer or simply want to create and produce pro-quality music in your Logic-based home studio, you'll find all the self-paced, step-by-step instruction you need here to begin creating your audio master works immediately. As both a professional musician and a former employee of eMagic and Apple (the former and current makers of the software), author David Dvorin knows Logic like no one else. Here, he uses project-based tutorials to reveal all of its secrets, including its newest: advanced DSP techniques and the ability to layer MIDI instruments and split channels. In short order you'll be scoring and composing; jamming with Logic's software instruments; employing advanced mixing, editing, and production techniques; and more. A companion CD includes trial Logic plug-in software and the lesson files needed to complete the book's exercises.
