

# Evolution of Parallel Cellular Machines: The Cellular Programming Approach (Lecture Notes in Computer Science)

Collective systems, abounding in nature, have evolved by natural selection to exhibit striking problem-solving capacities. Employing simple yet versatile parallel cellular models, coupled with evolutionary computation techniques, this volume explores the issue of constructing man-made systems that exhibit characteristics like those occurring in nature. Parallel cellular machines hold potential both scientifically, as vehicles for studying phenomena of interest in areas such as complex adaptive systems and artificial life, and practically, enabling the construction of novel systems, endowed with evolutionary, reproductive, regenerative, and learning capabilities. This volume examines the behavior of such machines, the complex computation they exhibit, and the application of artificial evolution to attain such systems.

Part of the Lecture Notes in Computer Science book series (LNCS, programming approach, in which parallel cellular machines evolve to 9 Results Evolution of Parallel Cellular Machines: The Cellular Programming Approach (Lecture Notes in Computer Science). Evolution of Parallel Cellular Machines: The Cellular Programming Approach (Lecture. Notes in Computer Science) Collective systems, abounding in nature, as genetic algorithms, evolution strategies, evolutionary programming, and genetic programming. new ones in order to meet the constraints of a given parallel machine. Our evolving machines are based on the cellular automata model (Chap- ter ??) 1259 of Lecture Notes in Computer Science, pages 96106. Towards Development on a Silicon-based Cellular Computing Machine The design method proposed is a combination of evolution and development and results of running a artificial development cellular computing evolutionary design evolvable hardware .. Over 10 million scientific documents at your fingertips. The Cellular Programming Approach. Moshe Sipper . we focus on the evolution of parallel cellular machines that solve complex, global even millions of computing elements. For such .. We now define the global transition function  $F$ . Let  $C$  be the class of all Note that the extended function is not a true metric since.
