

The Digitization of Cinematic Visual Effects: Hollywoods Coming of Age

The Digitization of Cinematic Visual Effects: Hollywoods Coming of Age, by Rama Venkatasawmy, analyzes how the Hollywood cinema industrys visual effects applications have not only motivated the expansion of filmmaking praxis, they have also influenced the evolution of viewing pleasures and spectatorship experiences. Following the digitization of their associated technologies, VFX have been responsible for multiplying the strategies of representation and storytelling, as well as extending the range of stories that can potentially be told onscreen. By the same token, the visual standards of the Hollywood films production and exhibition have been growing in sophistication. On the basis of displaying groundbreaking VFX immaculately realized through the application of cutting-edge technologies and craftsmanship and of projecting such a significant degree of visual innovation and originality, certain Hollywood movies have established techno-visual trends and industrial standards for subsequent filmmaking practice. Hollywood cinemas entry into the digital realm is intertwined with the intensification of conglomeratic practices within the movie business, the domain of techno-scientific R&D in filmmaking, and the unification of corporate media, information technology, and entertainment. Hence, the standardization of, and convergence toward, the digital medium is emblematic of Hollywood cinemas techno-industrial evolution in the late twentieth century. Accordingly, this volume identifies various synergies and partnerships between VFX providers, movie studios, graphic designers, and more that have emerged from a progressive growth of awareness in Hollywood of the digital mediums potential.
