

The Survive and Thrive Guide to Computer Validation

Computer validation regulations have increased worldwide by 300 percent since 1991. Drawing on her practical project experience in pharmaceutical, biotech, and software companies around the world, author Teri Stokes provides you with the tools they need to develop validation practices that fit into their organizations culture and can be integrated into the normal workflow of regulated activities. She clearly explains the influences placed upon computer validation by the worldwide GLP and GMP regulations and then helps to integrate good validation techniques into the laboratory or manufacturing environment.

Validation of electronic systems is a process versus a focused activity that finishes at a single T. Stokes The Survive and Thrive Guide to Computer Validation.
